In 2018, public K-12 education institutions experienced 122 known cybersecurity incidents.¹

As many as 10 to 20 times more undisclosed breaches could have occurred last year in the education sector.¹

Since 2016, more than 415 incidents have been catalogued.¹

Cybersecurity events can cost districts up to six-figures to redress.²

A U.S. school district becomes the victim of a cyberattack nearly every three days.³

Of the 122 cybersecurity incidents in 2018, Florida Virtual School was one of the few nontraditional schools affected.¹
